Press Release

DATPROF and Parasoft unite software test automation, service virtualization, and test data management to reduce environment wait times by over 200%

Agile teams can now leverage service virtualization and test data synthesis to gain full control of their test ecosystem.

Monrovia (USA)/ Berlin and Groningen (NL) – August 14, 2018 –

[Parasoft](http://www.parasoft.com), the leader in automated software testing, announced today a new partnership with [DATPROF](http://www.datprof.com), who specialize in test data subsetting and masking. Today's agile organizations face challenges with access to their complex environments and management of meaningful test data. Combining Parasoft and DATPROF gives users full control of their test environments, test data, and test automation strategy, for ultimate flexibility.

Specifically, combining the Parasoft Continuous Testing Platform and [Parasoft Virtualize](http://www.parasoft.com) with DATPROF Subset and DATPROF Privacy, users can free themselves from test constraints associated with centralized databases. Leveraging DATPROF's powerful algorithms, users can pull and mask realistic test data from production systems, then hand the baton to Parasoft, to simulate a test environment for on-demand testing, without ever having to connect to an actual database, ensuring data privacy and security. This frees users from common agile testing bottlenecks and creates a seamless test data and test automation workflow.

“Test data is the next big challenge the industry must overcome to take full advantage of the benefits of agile,” shared Chris Colosimo, Parasoft Product Manager. “By combining DATPROF's powerful data subsetting technologies with Parasoft's service virtualization technologies, we can leverage the intersection between test data and simulation to enable easy and continuous access to realistic test data.”

“Realizing highly flexible sets of test data is key to becoming more agile and delivering software faster, and DATPROF is focused on creating innovative technology to make this a reality,” said Maarten Urbach of DATPROF.

“Partnering with Parasoft will allow test data to become a seamless component of software test automation.”

#

About DATPROF (www.datprof.com):

DATPROF's test data solutions offers safe and fast test data to enable Agile and DevOps teams in the entire development lifecycle. From analysing and profiling existing data, to masking and generating safe data. Developers and testers can now work with realistic small subsets consistent over multiple applications. DATPROF's unique Test Data Provisioning platform offers test data automation and integration within any Continuous Integration and/or Delivery platform. This will save valuable time which can be used to develop and test more. Each tester can have their own test data and use or refresh the data at any moment.

About Parasoft (www.parasoft.com):

Parasoft provides innovative tools that automate time-consuming testing tasks and provide management with intelligent analytics necessary to focus on what matters. Parasoft technologies reduce time, effort, and cost of delivering secure, reliable, and compliant software, by integrating static and runtime analysis; unit, functional and API testing; and service virtualization. Parasoft supports software organizations as they develop and deploy applications in the embedded, enterprise and IoT markets. With developer testing tools, manager reporting/analytics and executive dashboarding, Parasoft enables organizations to succeed in today's most strategic development initiatives – agile, continuous testing, DevOps, and security.
